

U - JAGD

REAL-TIME TACTICAL SUBMARINE HUNT

by Dominik Bornhäußer

Hunt submarines with the frigate **F-217** or dive as the **U-boat**: sonar, radar, ESM, helicopter and torpedoes at nine stations. With **Remote Crew**, friends man the stations in a browser.

uConsole / Linux

Built for the ClockworkPi uConsole. One line installs the game, and it keeps itself up to date:

```
curl -fsSL https://raw.githubusercontent.com/db9979/uconsole_asw_game/main/packaging/uconsole/install.sh | sh
```

Windows / Browser

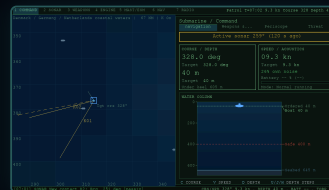

Just run U-Jagd-Windows.exe. Your PC becomes the server and you play in the browser: as a crew with one station each, or solo at all of them. Updates install automatically.
